PERIMETER E-SECURITY VULNERABILITY ASSESSMENTS OVERVIEW

With new vulnerabilities created daily, it's important that an organization keeps an updated view of its current security posture. Want to know how those recent patches affected your security posture? Curious what impact your latest firewall or router changes had on a malicious individual's view of your network? The Vulnerability Assessment Services are your solution to finding such answers.

Vulnerability Assessments have become such a standard best practice that many regulatory bodies strongly recommend or require institutions to have a policy that includes them. The PCI Security Council, publisher of the PCI-DSS set of requirements, is among these bodies now requiring organizations to perform assessments at least quarterly. With so many reasons to scan, it makes sense to consolidate all these scans inside one easily accessible location that includes scan scheduling, report review, and remediation recommendations.

THE PERIMETER E-SECURITY VULNERABILITY SCANNING SERVICE

Perimeter E-Security offers many scanning services to best fit your needs. Scanning services are divided into the following types:

- **External** - this vulnerability assessment utilizes Perimeter's cloud-based scanners to perform scans on your externally facing devices. Performing scans from this perspective helps you understand what an individual trying to break into your network sees. The same web-based portal is included for easy service management and reporting with this service as is included in the Internal service.
- **Internal** - this assessment performs scan from inside your network, revealing vulnerabilities that an individual would see once they are past the edge devices. The same web-based portal is included for easy service management and reporting with this service as is included in the External service. Scanner software is provided to you with this service that can be installed on a dedicated device or virtual machine, or can be loaded as needed on a shared device.
- **PCI** - this external scan is customized to include the required Statement of Attestation and Self-Assessment Questionnaire mandated by the PCI-DSS set of requirements. In addition to the management and reporting portal, this option provides additional reporting options including an overview of your PCI compliance status and more insight into any areas that may fall out of compliance.

Our managed solution provides the optimal solution for your scanning needs, bringing our scanning and security expertise to you. We will configure and schedule monthly scans for you. Our security experts will then review the outcome, discuss the findings and provide insight to solutions. Additionally consulting is also available to for your unique situation upon request. Should you prefer a more hands-on model, our On Demand model gives you the keys to the portal and allows you to schedule scans whenever you want and as often as you would like. Whatever your needs, we have a solution for you.

VULNERABILITY ASSESSMENTS

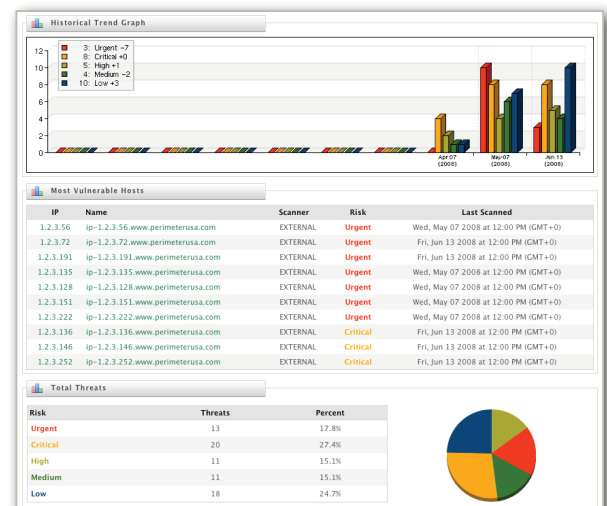

Internal, External, & PCI Scanning Services

THE BENEFITS OF PERIMETER'S VULNERABILITY ASSESSMENT SERVICES

Key Features	Benefits
Meets Regulatory Requirements	As an Approved Scanning Vendor (ASV) , Our PCI scanning service is specifically designed to help you become PCI-DSS compliant. However, other regulatory bodies (including FINRA, SOX, GLBA, and HIPAA) all require scanning as well. Our scanning services can help in achieving compliance with these regulations
Simple, Single Interface	All reporting and service management is accessed through one portal with a simple, customizable interface
Scheduled Reporting	Schedule reports as well as scans so they are automatically created and stored in your portal once your scan completes
Unlimited Scanning	The service offers unlimited scans, as frequently as you'd like (for the On-Demand versions)
Experts Ready to Assist	Our security experts will plan and schedule the scans with you and will provide remediation guidance after the scan is complete to rid your network of the discovered vulnerabilities (for the Managed versions)

PORTAL DASHBOARD

The dashboard shows executive level summaries for previous scans, historical trends, most vulnerable hosts, total threats, and several other scan reports. Depending on which services are subscribed to, up to 30 different dashboard widgets can be displayed. The screen is customizable to include or hide widgets.
