WEB CONTENT FILTERING

THE PERIMETER E-SECURITY WEB CONTENT FILTERING SERVICE:

Perimeter E-Security's Web Content Filtering service has been redesigned to utilize ViewPoint's complete and robust reporting, configuration, and auditing architecture. With Perimeter E-Security's Web Content Filtering service, you are not only ensuring that malicious websites are being blocked and that your employees are using their web browsing privileges in a productive manner, but you are also getting the deepest systematic reporting capabilities available. Besides getting a "complete" picture of your web traffic in one-click, you can also drill down to see exactly what sites your users are visiting while browsing the web. Configurations of your service, including customized alerts, block/allow categories, and allow/deny list URLs can be conveniently made directly in the portal.

- Non-business related web traffic or web access that violates your Internet usage policy
- Web sites known to be infected with viruses or spyware
- Web sites that create excess bandwidth utilization (Including web sites with streaming media, Internet radio and peer-to-peer sharing)
- Web sites that reduce productivity (Including web sites with advertisements, message boards, instant messaging and free downloads)

THE BENEFITS OF PERIMETER'S SERVICE

Key Features	Benefits
Superior Visibility/Reports	Thorough reporting including the ability to mine data by hits (total, blocked, or allowed), or systematically by either the web view or the organizational view
Customizable Alerts	Alerts can be set up to monitor specific users, departments, or hits to a particular URL so that managers are aware of their employees' web usage
Regulatory Requirements	Compliance reports covering FFIEC requirements, as well as general web monitoring compliance
Cost Effective	Eliminate the time managing web filtering policies and monitoring your employees' web usage by quickly obtaining detailed reports in ViewPoint
Easy Configuration	Web policies on a department level can be configured directly in the portal, saving time and boasting instant results; specific allowed and denied URL lists (formerly known as white/blacklists) can also be maintained in the portal easily and efficiently
Scalable Environment	Integrate other security solutions such as Firewall, IDS/IPS, Web Browsing AV, and VPN easily while leveraging the power and convenience of ViewPoint
